

Scott Simpson
Partner

Scott, Cambria's director of information technology, develops the infrastructure and systems to deliver online human resource management and talent development applications and tools to clients as well as the computing infrastructure for Cambria's internal systems. Scott has been instrumental in setting up Cambria's current web application platform and in developing survey, development planning, coaching management, and assessment center applications. He manages the fault-tolerant computing platform to ensure reliable and scalable delivery of hosted systems to all clients. Scott also oversees Cambria's multi-lingual online survey capabilities and the ongoing management of the "Best B-Schools" and executive education surveys for BusinessWeek.

Prior to Cambria, Scott was a project manager in the UK Ministry of Defense, where he designed and implemented planning and data-gathering applications as a member of the multinational project management team for Europe's largest defense project. Scott was previously a project management consultant to BlueCross BlueShield, where he developed and maintained the plan for nationwide linking of state medical-claims processing systems, and a redesign of their provider data management process.

Scott holds a BEng degree from Nottingham University, England and an ALM in information technology from Harvard University.
